

LIQUID SOLUTIONS

EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. PR – 01

Date: 27/4/13

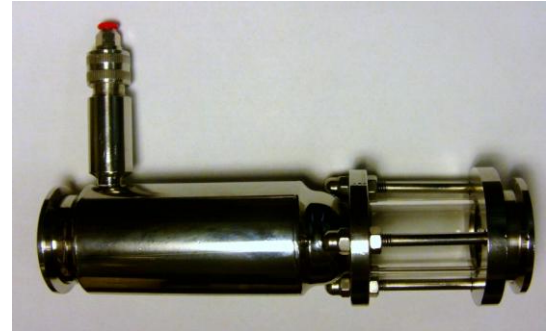

Carbonator / Wort aerator

Sintered stainless steel elements within a TEE-piece: gas (typically oxygen or CO₂) fed in through a side-branch dissolves in liquid flowing around the element.

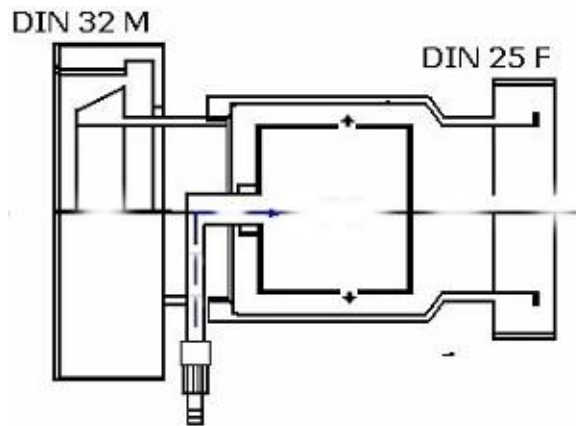

Standard device has one 45mm long element but up to three more may be added. Typically, 2 elements are sufficient for oxygenation of wort at 20-30 litres per minute.

Rate/efficiency of dissolution of gas depends on gas pressure, liquid temperature, flow rate and line pressure.

Available with DIN or triclover connections, others on request.

Designs may vary

Example prices:

Standard device (1 x 45mm element)	£ 300
Extra 45mm sintered elements	£ 75 each
Sightglass	£65
RJT fittings	£35 each

Prices exclude delivery, commissioning and VAT
