Sheet filters

Liquid is filtered through a set of disposable cellulose fibre sheets clamped between plastic distribution/drainage plates.

Clarity is determined by grade of sheet used, and 'sterile' filtration can be achieved with care. Liquid must be fed from a pressure tank, or via a pump, at a controlled flow rate.

A wide range of sizes are available and most units come with inlet and outlet valves, pressure gauges, drip tray and on a wheeled chassis.

Integral pumps are available for most models, suitable for non-viscous or semi-viscous liquids (e.g. wine, beer, oil)

20cm model shown with feed pump (optional extra).

Designs may vary

Example prices (approximate) :

20x20cm, 20-plate

£ 690

Centrifugal wine/beer pump:

extra £ 210

40x40cm, 20-plate

£ 2,800

Variable speed 'mono' pump with by-pass:

extra £1,460

Prices exclude delivery, commissioning and VAT
