EXPERTS IN LIQUIDS PROCESSING FILTRATION AND BOTTLING

Product ref. FL – 02

Date: 14/2/18

EnoMatic / EnoMaster vacuum bottle fillers

Compact, self-contained bench-top units. Bottles are placed under the nozzle and a special pump draws a vacuum, causing liquid to be sucked out of a feed tank and filled into the bottle to a pre-set level. Standard machines operate on 240V / 50H supply.

The units are suitable for still liquids without large particles, including wines, spirits and liqueurs, bottle-conditioned beer, sauces, oils and thin purees, water, juices, toiletries and cleaning chemicals, of low and medium viscosity and are easily adaptable for most shapes and sizes of bottle and jar. Suitable only for GLASS or other rigid-walled containers.

Options available for small bottles ('mini'), narrow / long necks, jars, puree, oil, large containers up to 5 litre, hot filling, etc.

Speed 250 – 1250 bottles per hour
