Inkjet date /code printer LX-200

Simple but full-featured inkjet printer for coding bottles, jars, cans, cartons, etc. – anything that is moving at constant speed past the printhead. May also print onto labels on a labelling machine, or other moving items.

The LX-200 coder has excellent print quality using HP ink cartridges, low maintenance and a simple user interface for fast message creation and change over. The perfect coder for sell by, best before, lot, batch, barcode, QRcode, logo, sequential number, and product information coding onto porous and non-porous surfaces using PolyCode or water based inks.

Maximum total print height 12.5mm, or two printheads may be 'stitched' together to give 25mm height.

Can operate in horizontal or vertical (downward) mode. Complete with support bars, clamps and brackets kit. Additional bracketry / modifications may be necessary to fit onto production machinery, e.g. labellers.

Various conveyer belt options are available to enable a machine to work as a stand-alone coding solution.
